

AppDriven - Features Overview

Feature	Description
User Management	Full CRUD with ASP.NET Core Identity
Role Management	Roles with IsAdmin flag and per-module permissions
Module System	Dynamic navigation menu with unlimited nesting via ParentGroup
Permission System	Per-role, per-module CRUD permissions
[PlatformField] Attribute	Decorate entity properties to drive automatic UI generation
AutoListPage	List page with filters, export, import, bulk delete, saved views, notifications
AutoDetailPage	Detail/edit page with FluentValidation, workflow, child tabs
AutoForm	Auto-generated form with FluentValidation — inline errors and summary
AutoGrid	Server-side grid with LookupFk resolution, checkboxes, empty state
AutoFilter	Filter bar driven by [PlatformField] metadata
AutoChildGrid	Inline child grid for master/detail — auto-hides parent FK field
ExportButtons	PDF and Excel export driven by ShowInExport metadata
Generic Import	CSV and Excel import with column mapping, preview and validation
Bulk Delete	Select multiple rows and delete in one action
Saved Views	Save and restore grid state — filters, sort, search, page size
GenericFilteredRepository	Base repository with search, sort, filter and audit
GenericLookupRepository	Base for lookup entities — extends GenericFilteredRepository + ILookupRepository
AddEntity<T> extension	One-line repository registration — auto-registers all needed interfaces
LookupFk / SoftLink	FK and autocomplete inputs — any entity can be a lookup target
LookupDisplayField	Use any property as display field for LookupFk — not just Name
Layout Theming	MudTheme + LayoutSettings via appsettings.json
Dark Mode	Per-user dark/light mode stored in DB via UserPreferenceState
User Preferences	Per-user settings in DB. Extensible.
Notification System	SignalR real-time with bell icon, badge, toast, history, and optional per-user email delivery
Scheduled Notifications	Background service for user reminders and app jobs
User Reminders	Self-service scheduled reminders — OneTime, Daily, Weekly, Monthly, or Cron, delivered via the standard notification system
Email Log	Admin-viewable history of every email delivery attempt, independent of console output
User Presence & Directory	IUserPresenceService/IUserDirectoryService — who's currently connected and the full user list, for any app-level user picker
Cleanup Jobs	Auto-delete old read notifications and audit logs on schedule
Dashboard Widgets	StatCard, BarChartWidget, DonutChartWidget, RecentItemsWidget
Workflow Engine	State machine — no-code via Workflow Designer or code via IWorkflowDefinition<T>, with DB-stored permissions, history, comments

AD Studio	Visual entity designer — generates all boilerplate files as ZIP
Audit Logging	Automatic EF Core interceptor logging all DB changes
Generic API Layer	JWT-authenticated REST API
Image Management	Generic entity image upload and management
Document Management	Versioned file uploads and downloads per entity via IHasDocuments — configurable categories, secure storage
Entity Lifecycle Support (Soft Delete)	Soft delete, restore, hard delete and purge cleanup via ISoftDeletable
Many-to-Many Grid	AutoManyToManyGrid for junction-table relationships — AD Studio generates the junction entity automatically
Report Designer	Create, run and export grouped/aggregated reports with PDF and Excel output
IEntityRegistry	Generic entity registry auto-populated by AddEntity — drives Reports, future features
Hooks (Entity + Workflow)	Custom logic attachment points — CRUD lifecycle (BeforeAdd/AfterAdd/BeforeUpdate/AfterUpdate/BeforeDelete/AfterDelete) plus workflow transitions
Concurrency Management	Optimistic concurrency via IConcurrencyAware/RowVersion with Reload/Overwrite/Cancel conflict dialog
