

AUGMENTED DEVELOPER

MODEL. BUILD. EVOLVE.

Business software,
built the smart way.

AD Vestro models the business. AD implements every feature on top of the model.

MODEL ONCE

Capture the business reality.

GENERATE EVERYWHERE

AD builds the foundation.

STAY IN CONTROL

Extend, refine and own it.

From intent to business software

Two complementary layers make the proposition simple: Vestro helps define the model; AD provides the application machinery around it.

AD VESTRO

Model & refine

A visual, AI-assisted environment for describing entities, fields, relationships and application behaviour.

1

DESCRIBE

Explain what you need.

2

MODEL

Shape the business model.

3

REFINE

Review and control it.

AD PLATFORM

Implement & run

AD turns the model into a working application and supplies the reusable capabilities that business software repeatedly needs.

1

APPLICATION

UI, CRUD, search & data.

2

CONTROL

Security, permissions & audit.

3

OPERATIONS

Workflow, notifications & reports.

THE RESULT

The model describes what is different. AD supplies what every serious application needs.

Describe it. Model it. Refine it. Generate it.

AI accelerates the first draft. Vestro makes the result inspectable, editable and controlled.

1

DESCRIBE

Tell AI what you need in natural language.

2

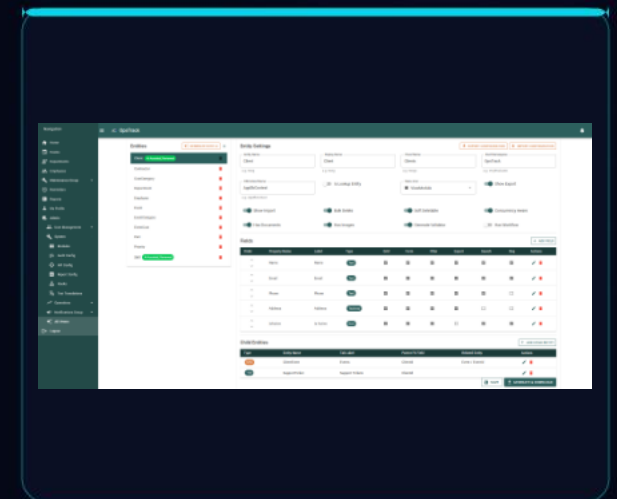

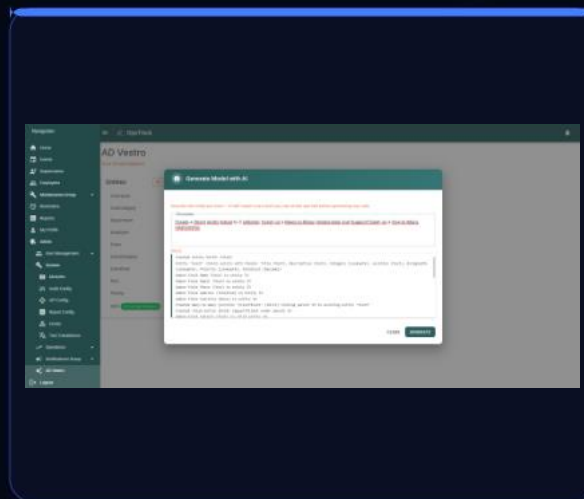

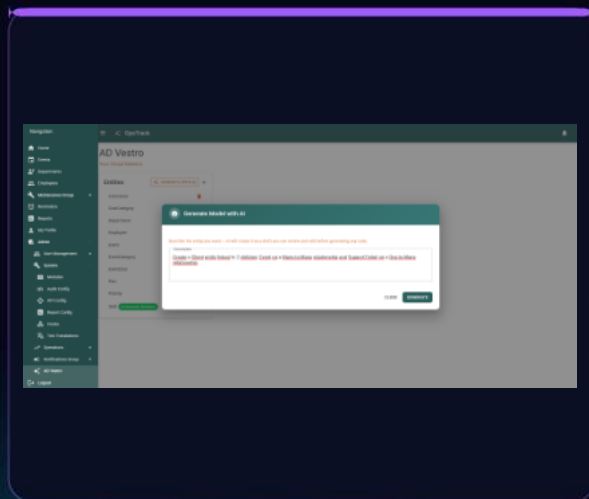

VESTRO MODELS

AI creates entities, fields & relationships.

3

REFINE & GENERATE

Review, adjust and move towards software.

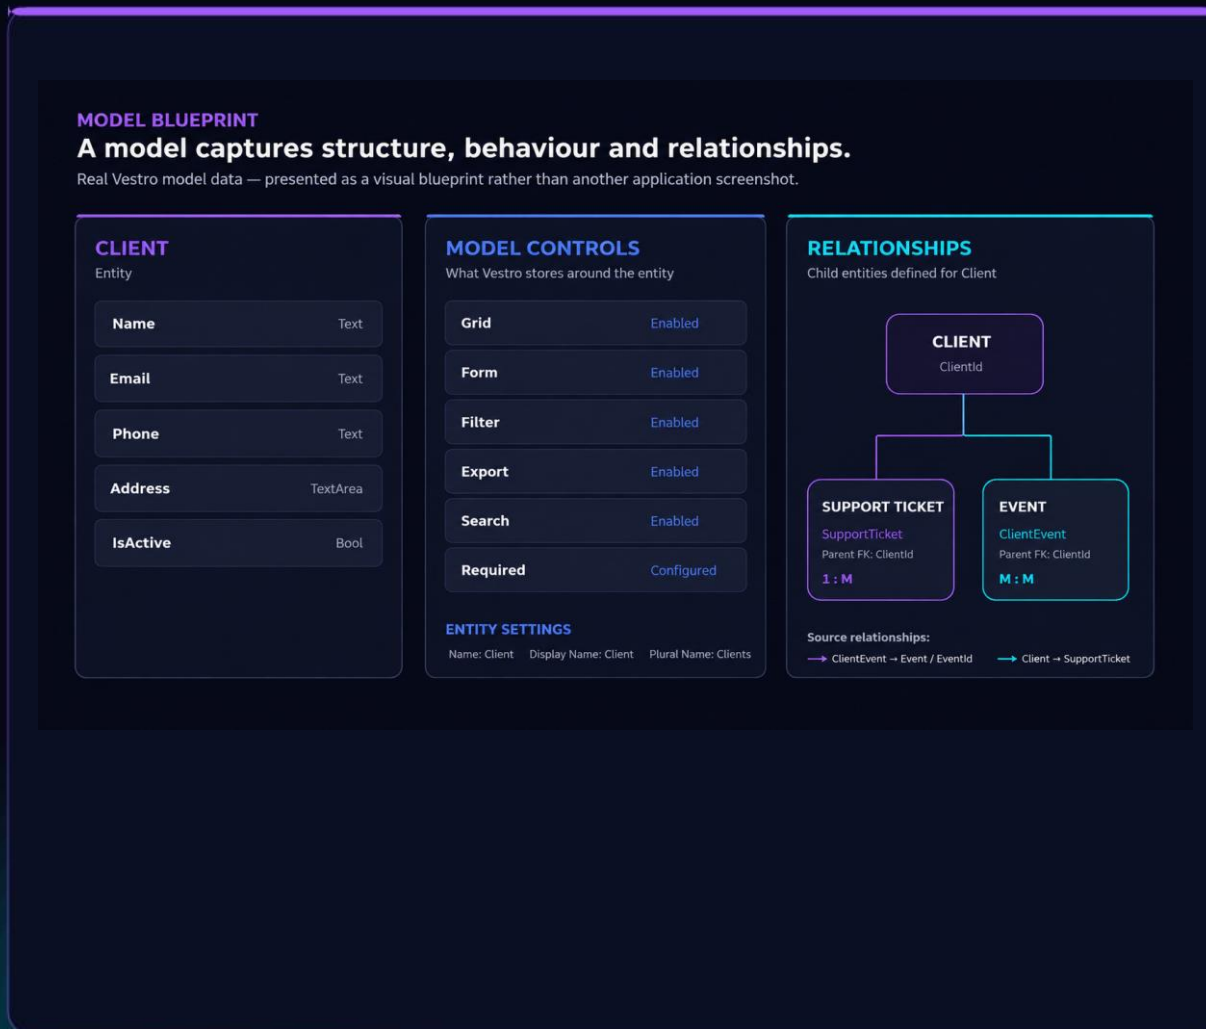

AI accelerates the process.

Vestro helps turn that acceleration into a controlled, reusable development workflow.

A model is more than a list of entities.

Vestro brings the structure of the application into one place so the developer can reason about it before implementation spreads across code.

Entities

Define the business objects the application works with.

Relationships

Express one-to-many and many-to-many relationships explicitly.

UI & behaviour

Capture configuration that would otherwise be repeated throughout the application.

AI assistance

Start from natural language, then review and refine the model.

MODEL FIRST

A clearer model makes
implementation easier to change.

Everything you need. Built on the model.

The point is not to eliminate development. It is to remove repeated foundation work that does not differentiate one business from another.

APPLICATION

CRUD & UI generation • Filtering & Search • Child entities • Saved views • Import/Export • Generic APIs

BUSINESS LOGIC

Validation • Entity hooks • Workflow hooks • Soft delete • Concurrency management

WORKFLOW & COMMUNICATION

Workflow engine • Web Push notifications • Scheduled notifications • Reminders • Email log

SECURITY & CONTROL

User management • Roles & permissions • ASP.NET Core Identity • Audit & access control

BUSINESS INFORMATION

Documents • Images • Report designer • Data lifecycle management

REUSABLE FOUNDATION

Build the plumbing once. Focus engineering effort on the business capabilities that make the product different.

Build once. Reuse the foundation.

The value grows when the same foundation supports multiple applications, products or customer projects.

REDUCE REPETITION

Stop rebuilding identity, CRUD, permissions, workflow and reporting foundations for every application.

STANDARDISE DELIVERY

Use common patterns and reusable capabilities across projects and teams.

ACCELERATE NEW PRODUCTS

Start closer to the business problem instead of starting with an empty project.

KEEP CONTROL

The model is inspectable and editable. AI helps; developers decide what ships.

AD PACKAGES

Reusable capabilities can extend the platform across applications and projects.

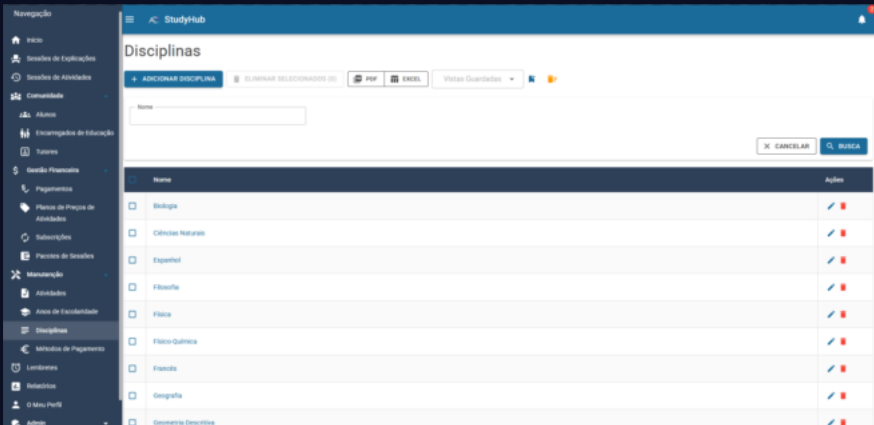

PROVEN IN PRODUCTION

Real applications. Real results.

AD is being used to build complete business applications — not just isolated demos.

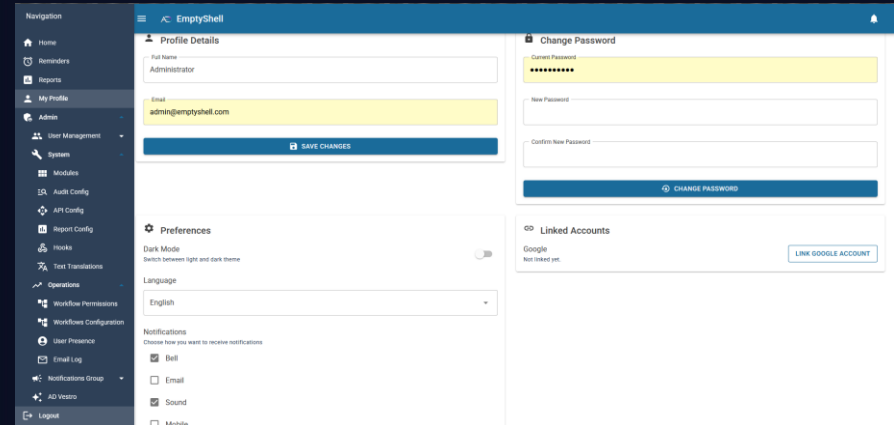

STUDYHUB — TUTORING CENTRE MANAGEMENT

Students, sessions, packages, subscriptions, tutors, billing and much more, shown here in Portuguese with English and Spanish also supported.

EMPTYSHELL — APPLICATION FOUNDATION

Generated from the AD Guide and ready to become a business-specific application.

From operations to education to almost any industry.

AD adapts to your business — not the other way around.

WORK WITH AD

Choose the path that fits you.

This is the beginning of a journey. The opportunity is simple: use it to build software that matters.

BUILD

You have a business problem or product idea. We build the software with AD.

PARTNER

You are a software company and want a reusable application foundation.

LICENSE

Use AD and AD Packages to accelerate your own development.

STRATEGIC

For the right organisation, the technology and IP can become a larger strategic asset.

AD VESTRO

Model once. Generate everywhere. Stay in control.
